sponsored by **Guerbet** 

Masterclass in Imaging of Prostate Cancer is a new one-day teaching course in the highly commended ICIS interactive series, which will review multiparametric imaging for the diagnosis and active surveillance, as well as management, of intermediate to high risk prostate cancer. The workshop will also highlight new (PIRADS) interpretative guidelines.

The course is limited to 40 participants, split between two parallel workshops running concurrently. Each 1.5 hour session will commence with a short lecture followed by mentored review of carefully selected cases on individual workstations. A comprehensive workbook is provided to enhance learning.

The faculty comprises four experts in prostate imaging who will each focus on a particular aspect to provide practical and relevant information on prostate imaging. This includes the use of multiparametric MRI for the diagnosis and characterisation of prostate cancer, active surveillance for low-risk disease, imaging in intermediate/high-risk disease, and the new PIRADS interpretative guidelines.

CPD accreditation by the Royal College of Radiologists has been applied for and a certificate of attendance will be given to all participants.

We gratefully acknowledge the support of Guerbet for this course.
